Regional update

This report summarizes the key achievements recorded under different components of the project between July to October, 2018 period.

Informal seed system component

Under informal seed system, BENEFIT-ISSD project, Oromia East unit, organized field day at Doba woreda on October 2, 2018 in collaboration with Doba woreda Bureau of Agriculture (BoA). The objective of the field day were to evaluate the status of the 2017 crowdsourcing (CS) scaling up activities and 2018 CS and Participatory Variety Selection (PVS) research trials conducted by farmers and researchers; promote best practices and success stories among stakeholders; and enhance networking among farmers for further seed exchange mechanism. A total of 175 peoples of whom 75 male and 54 female farmers, 46 stakeholders representing zone and woreda BoA and respective development agents, CARE Ethiopia west Hararghe field office, researchers and lecturers from universities (Haramaya and Oda Bultum), and Chiro national sorghum research centres and media organizations were participated.

In addition, different crop varieties of chickpea and teff has been packed and deployed to a total of 600 farmers of which 50% are women in four woredas (Gurawa, Oda Bultum, Doba and Meta). Moreover, score card used for recording farmers preferences and variety traits was developed and shared with development agents and focal persons. Orientation on data management and handling of score card was given to both development agents and woreda focal persons

Stakeholders field day organized at Doba woreda, Walkituma Waji Kebele

Orientation given for focal persons and development agents on data management

Stakeholders field day organized at Doba wored, Walkituma Waji Kebele

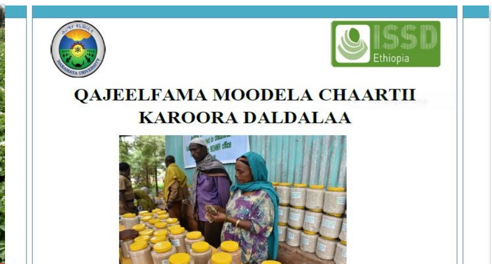
LSB development

Under LSB development component, training was conducted for two days on business plan canvas model for 44 people representing SPCs executive committees, cooperative DAs, focal persons from indirect support partners, and zone representatives of cooperative promotion agencies. The training was conducted on August 2, 2018 at Ras Hotel, Harar city. For the implementation of the training template for using seed business canvas model was developed and deployed to 13 Seed Producer's Cooperatives (SPCs), cooperative promotion agencies and indirect support partners of SPCs.

Under LSB development, supervision and technical backstopping activities was conducted to six direct support SPCs to create awareness on the provision of basic seed of Tef and chickpea and strengthening internal quality seed control activities. Moreover, with collaboration of stakeholder and partners 25 SPCs performance evaluation was conducted by participating 125 executive committee members and 25 DAs using KPI guideline. Finally, One day coaching and technical backstopping was conducted at Abdi Gudina, Misoma Gudina and Burka Gamachu SPCs on the issue of increasing financial capital through internal finance mobilization and increase number of women in the SPCs. A total of 15 executive committee members representing these SPCs were participated. Similarly, with collaboration of partners and stakeholders follow up and monitoring is conducted at 20 indirect SPCs to give technical support on seed sales and marketing strategy and seed production.

Training provided on business canvass model for partners and SPCs

Coaching and supervision made at Haji Faji SPC



Business plan canvas developed for SPCs

Seed Value Chain Development

Under SVC component, field visit was facilitated to coach and monitor implementation of ongoing seed value chain innovation projects. In addition, grant transferred to partners for implement scaling up and new piloting seed value chain innovation project was made. For implementation of pilot innovation project to enhance efficiency of existing conventional seed distribution system started in collaboration with two partners (Chercher Oda Bultum and Afren Kalo unions). Pilot woredas selection and debriefing workshop was conducted in east and west Hararghe zones. The selected woredas for implementation of the pilot project includes Kombolcha, Kersa and Jarso woredas from east Hararghe zone and Oda Bultum, Habro and Guba Koricha woredas from west Hararghe zone.

On the other hand, study was conducted with objectives to assess performance and challenges of seed sector in East and West Hararghe zones. Different issues including seed production, utilization, marketing and distributions was covered in this study. The report of this study was completed and facilitation of validation workshop is underway.

To improve seed quality and value addition, the project explored the mechanism by which the idle seed processing plant in Haramaya University (HU) can be used for seed processing in Hararghe, with the intention to provide service for SPCs. Following this, Chercher Odabultum farmers' cooperative union was identified as potential partner for providing the service. In doing so, an agreement was reached with top HU officials to donate the plant to Chercher Odabultum farmers' cooperative union. Currently, the process of transferring seed processing plant from Haramaya University to Chercher Odabultum Farmers' cooperative union was completed and installation work is underway.

Seed sector persfromances and challenges survey conducted in east and west Hararghe

Seed cleaning plant donated for Chercher Oda Bultum Farmers' cooperative Union

Knowledge Sharing and Communication component

With the objective to enhance the marketing and use of quality seed, mini-seed marketing was facilitated through Abdi Gudina and Burqa Misoma SPCs in collaboration with Chercher Odabultum Farmers' Cooperative Union. The mini-seed market was conducted at Oda Baso FTC in Oda Bultum woreda on June 5, 2018. A total of 223 farmers (105 women's) representing three seed producers cooperatives (Abdi Gudina, Burqa Misoma and Oda Mada) and seed buyers (local farmers), 26 participants from development agents, woreda experts, heads from Oda Bultum cooperative promotion agency and Bureau of agriculture was involved.

An interview with women and men farmers to document a success story on how gender sensitive crowdsourcing and PVS have revealed the varieties and traits most preferred by male and female farmers was conducted. The result was shared with research, extension and development partners in order influence them to consider gender needs and priorities during variety development and popularization. Accordingly, the view of 11 farmers (four men) involved in CS trials was documented and copied into newsletter to share with audiences.

Documenting and sharing of different success stories, posters and pictures, news and brief reports of ISSD activities was conducted. Majority of this printed material was shared with audiences through email, and face book and generates tremendous likes, shares and comments, and helped bring recognition of ISSD project and partners including ministry of agriculture and ATA. The profile of directly and indirectly supported SPCs (Awubara and Abdi Gudina) was documented on posters in Oromo language for promoting their products to customers.

The field day was also organized on crowdsourcing and PVS research trials and LSB development model to share success stories and lessons with partners and stakeholders. The field day was organized at Haramaya University research stations, Haji Faji SPC, Kurfa Chale and Meta woredas respectively. A total of 332 participants (44 women farmers) from farmers, SPCs, unions, BoA, cooperative promotion agencies, agricultural research centers, and universities was participated. The objectives of the field day was to promote success stories of CS and PVS activities among farmers; enhance functional local linkage and collaboration among seed producers and users, and create demand for quality seeds. Documentation and sharing field day reports was conducted in (pint and audio-visual) and shared with ISSD and Ethiopian News Service webisites, and broadcasted on OBN, and HU FM radio.
